PCR Plates

ISO 9001

ISO 13485

Features

After over 30 tests, we have identified the best polypropylene material for PCR thermal cycling.

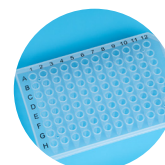

The uniform thin wall thickness ensures optimal heat transfer.

Various specifications available: no skirt, half skirt, full skirt to meet different needs.

The alphabetic grid ensures easy and precise identification.

Free from RNase, DNase, heavy metals, and human DNA contamination.

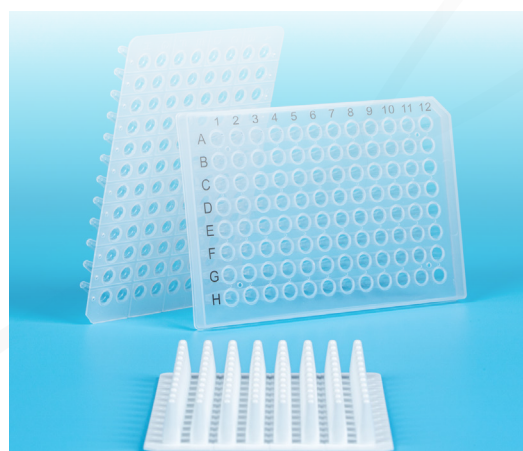

Raw Material

The plates are manufactured from medical-grade polypropylene.

Application

The PCR plate serves as a crucial tool for conducting polymerase chain reaction (PCR) experiments. It is particularly well-suited for high-throughput screening thermal cycler applications and boasts compatibility with most thermal cyclers. The plate streamlines the process, allowing for rapid fragment amplification without manual intervention. Its versatility extends to applications such as gene expression analysis, pathogen detection, DNA cloning, library preparation, and numerous other research endeavours.

Sealing films for plates

ISO ISO9001

ISO ISO13485

Features

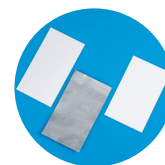

Ensures contamination prevention between wells and provides a reliable seal.

Leaves no sticky residue on the plate after peeling off.

Offers a variety of sealing film options to choose from.

Sterilized, free from DNase, RNase, DNA, heavy metals, and pyrogens.

Raw Material

These products are manufactured using polyester resin or composite aluminum foil.

We Open To New Ideas!

Application

These sealing films are designed to fit various PCR plates, ensuring optimal protection during the PCR cycle and sample storage. It provides a secure seal that prevents differential evaporation, safeguarding your experiments throughout the process.
